

The Model 4415 has many applications but one of the most unique can be found out on the farm.

Farmers check their equipment before they head out into the field but what happens when a spray nozzle stops working half way through the night?

The Model 4415 is the perfect little product for this scenario. Its pencil-like beam can be aimed directly across the firing spray nozzles, illuminating the mist as it hits the air, making a blocked nozzle completely obvious to the operator for a quick fix.

The 4415 is available in a blue, red or white light output.

Part Number	Beam Colour	Voltage	Pack QTY
0552991	Blue	12-110 DCV	1
0552981	Red	12-110 DCV	1
0551001	White 6000K	12-24 DCV	1
