# Pro Kit

## The fast and professional solution for workshops.

**Restores up to 50 Cars**

### Part No. HRK03

Designed for the trade to deliver the highest quality finish at the most economical price.

Pro Kit also includes a professional electric sander to dramatically reduce restoration time.

# Pro Kit is a complete workshop solution for high volume headlight restorations.

The Pro Kit is designed to service 50 vehicles and all the components come in a solid case that can be easily restocked with all ordering details on the inside lid. The kit is specifically designed with high volume workshops in mind as the included electric orbital sander dramatically shortens the time it takes to service a vehicle.

The market for vehicles needing restoration is enormous, so Pro Kit Headlight Restoration is an opportunity to create new income for your business.

| HRK10 | 1000 Grade Sanding Disk | Qty 50 | HRK15 | Electric Orbital Sander | Qty 1 |

Not supplied in the kit • Masking tape • cleaning cloth • protective • glove and water bottle

# Dramatically more light output

## Improves night driving safety

**+183%**

***increase in light output after the restoration***

Tests conducted by Invision found that the light output of a UV damaged lens is greatly reduced due to the fogging and abrasion on the surface of the lens. This reduced light output means the headlights are operating well below their original design specification which is dangerous for drivers when using their headlights at night.

This is especially important for older drivers who require more light to see at night.

The light output was measured before the headlight restoration process, then after it on vehicles that you would consider not really bad.

In a number of cases, the light output on the restored headlight increases by 183%.

***Light output registered at 6***

***Light output registered at 17***

# Long Life Protection

## The high gloss, UV coat difference

During the headlight restoration process, the Invision system removes all the old coatings from the lens and creates an ultra clean, smooth surface. The final process is the application of a high gloss, UV resistant coating that enhances the crystal clear finish while providing a long life protective coating for the headlight.

The Invision Headlight restoration system restores the headlights back to 'as new' condition. Not only is it an essential safety process but it also rejuvenates the overall appearance of the vehicle.

All the kits in the Invision Headlight restoration range include this unique finish. It's easy to apply and delivers amazing results.

For further details about the Headlight Restoration range contact Invision Sales.
