

Restore

Your headlights to as new condition

A comprehensive kit designed to restore your headlights to as new condition!

Dramatically more Light Output

Improves night driving safety

Tests conducted by Invision found that the light output of a UV damaged lens is greatly reduced due to the fogging and abrasion on the surface of the lens. This reduced light output means the headlights are operating well below their original design specification which is dangerous for drivers when using their headlights at night.

This is especially important for older drivers who require more light to see at night. The light output was measured before the headlight restoration process, then after it on vehicles that you would consider not really bad. In a number of cases, the light output on the restored headlight increases by 183%.

Light output registered at **6**

Light output registered at **17**

Long Life Protection

The high gloss, UV coat difference

During the headlight restoration process, the Invision system removes all the old coatings from the lens and creates an ultra clean, smooth surface. The final process is the application of a high gloss, UV resistant coating that enhances the crystal clear finish while providing a long life protective coating for the headlight.

The Invision Headlight restoration system restores the headlights back to 'as new' condition. Not only is it an essential safety process but it also rejuvenates the overall appearance of the vehicle. All the kits in the Invision Headlight restoration range include this unique finish. It's easy to apply and delivers amazing results.

Trade Pack

The cost effective way
for trade workshops

Restores up to **10** Cars

Part No. HRK02

Designed for trade workshops to economically restore the headlights of up to ten vehicles.

Kit Contents:

- 400 Grade Sandpaper Qty: 10
- 1000 Grade Sandpaper Qty: 10
- 2000 Grade Sandpaper Qty: 10
- 3000 Grade Sandpaper Qty: 10
- Yellow-X Cleaner 60mL Qty: 2
- UV Clear Coat 60mL Qty: 1
- UV Clear Coat Application Cloth (Blue Cloth) Qty: 10
- Protective Glove Qty: 1

Not supplied in the kit: Water bottle or hose, masking tape

Pro Kit

The fast and professional solution for workshops

Restores up to **50** Cars

Part No. HRK03

Designed for the trade to deliver the highest quality finish at the most economical price. Pro Kit also includes a professional electric sander to dramatically reduce restoration time.

Pro Kit is a complete workshop solution for high volume headlight restorations.

The Pro Kit is designed to service 50 vehicles and all the components come in a solid case that can be easily restocked with all ordering details on the inside lid. The kit is specifically designed with high volume workshops in mind as the included electric orbital sander dramatically shortens the time it takes to service a vehicle.

The market for vehicles needing restoration is enormous, so Pro Kit Headlight Restoration is an opportunity to create new income for your business.

Pro Kit Contents

HRK09	400 Grade Sanding Disk	Qty 50
HRK10	1000 Grade Sanding Disk	Qty 50
HRK11	2000 Grade Sanding Disk	Qty 50
HRK12	3000 Grade Sanding Disk	Qty 50
HRK13	UV Clear Coat Applicator	Qty 50
HRK15	Electric Orbital Sander	Qty 1

Note: Masking tape, cleaning cloth, protective glove and water bottle not supplied.

Five Easy Steps to restore headlights to as new condition

A headlight restoration will dramatically improve the look and the light output of damaged headlights.

The Invision Headlight Restoration system is a professional product that restores the headlights to as new condition. During the restoration process, the corroded plastic and original headlight PC hard

coating are completely removed. The final step is to apply a new protective gloss UV coating that effectively restores the headlight to as new condition. This coating is unique to the Invision system and delivers long lasting protection.

For a complete video showing the headlight restoration of this vehicle go to www.invisionsales.com.

1. Protect the paintwork

2. Remove corrosion

3. Sand

4. Clean

5. Apply UV gloss clear coat
